

Wayne Rifer

Building on a career developing recycling solutions, in 2003 Mr. Rifer participated in a stakeholder negotiation to develop a national electronics recycling system. Then in 2005 he founded EPEAT (the Electronics Product Environmental Assessment Tool – www.epeat.net), which is a market-place incentive for improved environmental performance of electronics. In recent years he has focused on standard development and on research into the toughest environmental challenges facing the electronics industry. Mr. Rifer serves on the Board of the National Center for Electronics Recycling (NCER).
